ELSEVIER

Operations Research Letters 15 (1994) 283–284

operations research letters

Author Index to Volume 15

The issue number is given in front of the page numbers

Abate, J. and W. Whitt, A heavy-traffic expansion for asymptotic decay rates of tail probabilities in multichannel queues (5) 223–230
Andreatta, G. and F.M. Mason, A note on "A perfect forward procedure for a single facility dynamic location/relocation problem" (2) 81– 83
Bixby, R.E. and M.J. Saltzman, Recovering an optimal LP basis from an interior point solution (4) 169–178
Bruneel, H. and I. Wuyts, Analysis of discrete-time multiserver queueing models with constant service times (5) 231–236
Bussieck, M., H. Hassler, G.J. Woeginger and U.T. Zimmermann, Fast algorithms for the maximum convolution problem (3) 133–141
Chari, M.K., On reversible semi-Markov processes (3) 157–161
Costa, M.-C., Persistency in maximum cardinality bipartite matchings (3) 143–149
Fernández, E. and K. Jørnsten, Partial cover and complete cover inequalities (1) 19– 33
Fu, M.C. and J.-Q. Hu, Smoothed perturbation analysis derivative estimation for Markov chains (5) 241–251
Gauvin, J., *see* Savard, G. (5) 265–272
Greenberg, H.J., The use of the optimal partition in a linear programming solution for postoptimal analysis (4) 179–185
Gu, Z., E.L. Johnson, G.L. Nemhauser and Y. Wang, Some properties of the fleet assignment problem (2) 59– 71
Hakimi, S.L., *see* Labbé, M. (3) 115–126
Hassler, H., *see* Bussieck, M. (1) 133–141
Ho, T.-Y. and L.-H. Hsu, A note on the minimum cut cover of graphs (4) 193–194
Hsu, L.-H., *see* Ho, T.-Y. (4) 193–194
Hu, J.-Q., *see* Fu, M.C. (5) 241–251
Johnson, E.L., *see* Gu, Z. (2) 59– 71
Johnson, M.A., S. Lee and J.R. Wilson, NPPMLE and NPPSIM: Software for estimating and simulating nonhomogeneous Poisson processes having cyclic behavior (5) 273–282
Jørnsten, K., *see* Fernández, E. (1) 19– 33
Kelly, F.P., On tariffs, policing and admission control for multiservice networks (1) 1– 9
Kumar, A., *see* Kuri, J. (1) 41– 46
Kuri, J. and A. Kumar, On the optimal allocation of customers that must depart in sequence (1) 41– 46
Labbé, M., E.F. Schmeichel and S.L. Hakimi, Approximation algorithms for the capacitated plant allocation problem (3) 115–126
Lee, E.Y. and J. Lee, Optimal control of a model for a system subject to random shocks (5) 237–239
Lee, J., *see* Lee, E.Y. (5) 237–239
Lee, S., *see* Johnson, M.A. (5) 273–282
León, T. and E. Vercher, New descent rules for solving the linear semi-infinite programming problem (2) 105–114
Liao, C.-J. and W.-H. Yang, An inventory system with multiple replenishhment scheduling (4) 213–222

Elsevier Science B.V.

Liman, S.D. and S. Ramaswamy, Earliness-tardiness scheduling problems with a common delivery window (4) 195–203
Mangasarian, O.L., Error bounds for inconsistent linear inequalities and programs (4) 187–192
Mason, F.M., *see* Andreatta, G. (2) 81– 83
Nemhauser, G.L., M.W.P. Savelsbergh and G.C. Sigismondi, MINTO, a Mixed INTeger Optimizer (1) 47– 58
Nemhauser, G.L., *see* Gu, Z. (2) 59– 71
Park, D., H.G. Perros and H. Yamashita, Approximate analysis of discrete-time tandem queueing networks with bursty and correlated input traffic and customer loss (2) 95–104
Perros, H.G., *see* Park, D. (2) 95–104
Phong, T.Q., An algorithm for solving general D.C. programming problems (2) 73– 79
Rajagopalan, S., Two commodity flows (3) 151–156
Ramaswamy, S., *see* Liman, S.D. (4) 195–203
Rommel, C.G., A solution for the $M^X/G/1$-PS process response time (5) 253–263
Saltzman, M.J., *see* Bixby, R.E. (4) 169–178
Savard, G. and J. Gauvin, The steepest descent direction for the nonlinear bilevel programming problem (5) 265–272
Savelsbergh, M.W.P., *see* Nemhauser, G.L. (1) 47– 58
Schmeichel, E.F., *see* Labbé, M. (3) 115–126
Selvam, D.D. and V. Sivasankaran, A two-phase queueing system with server vacations (3) 163–168
Shepherd, F.B., A note on clutter partitions (3) 127–131
Sigismondi, G.C., *see* Nemhauser, G.L. (1) 47– 58
Sivasankaran, V., *see* Selvam, D.D. (3) 163–168
Song, J.-S., Understanding the lead-time effects in stochastic inventory systems with discounted costs (2) 85– 93
Ventura, J.A., *see* Weng, M.X. (4) 205–211
Vercher, E., *see* León, T. (2) 105–114
Wang, Y., *see* Gu, Z. (2) 59– 71
Weng, M.X. and J.A. Ventura, A quadratic integer programming method for minimizing the mean squared deviation of completion times (4) 205–211
Whitt, W., *see* Abate, J. (5) 223–230
Wilson, J.R., *see* Johnson, M.A. (5) 273–282
Woeginger, G.J., *see* Bussieck, M. (3) 133–141
Wuyts, I., *see* Bruneel, H. (5) 231–236
Yamashita, H., *see* Park, D. (2) 95–104
Yang, W.-H., *see* Liao, C.-J. (4) 213–222
Yao, J.-C., Existence of generalized variational inequalities (1) 35– 40
